

# ODG Mobile Pro

Evidence-Based Medicine (EBM) *on the Move*

## Take action with the evidence using ODG Mobile Pro

- Access the ODG Treatment and RTW Guidelines covering all 10,000 diagnoses and 99% of treatments seen in workers' comp, plus group health
- Delivers the ODG super content including four modules in a user-friendly touchscreen interface
- Quote the most widely used medical treatment, utilization review & disability guidelines worldwide, with links to the supporting evidence in abstract form
- Platform independent (iPhone, iPad, Android, BlackBerry, tablet, laptop, PC and Mac-ready)
- Email functionality with built in forms to capture and deliver preauthorization requests and responses
- Back all of your treatment decisions with the strength of ODG, at the tip of your finger, and automatically cited in your payer-provider communications

Topic: Surgery for impingement syndrome

Recommendation Type: Recommended ✓

**Official Disability Guidelines™**

**ODG Indications for Surgery -- Acromioplasty:**

**Criteria** for anterior acromioplasty with diagnosis of acromial impingement syndrome (80% of these patients will get better without surgery.)

**1. Conservative Care:** Recommend 3 to 6 months: Three months is adequate if treatment has been continuous, six months if treatment has been intermittent. Treatment must be directed toward gaining full ROM, which requires both stretching and strengthening to balance the musculature. PLUS

**2. Subjective Clinical Findings:** Pain with active arc motion 90 to 130 degrees. AND
